

Needle Valve

NV

Operation

Seat and plug of the needle valve are conical shaped. By lifting or lowering the plug, the available cross-section can be increased or decreased, that way a fine adjustment of the actual flow is achieved.

Application

Flow-adjustment of liquids and gases.

Features

Characteristics of this sturdy type are:

- Suitability for high temperature
- high pressure resistance
- Threaded connections
special threads on request

Installation hints

The installation of the needle valve can be done in any way in the system. The flow direction must be observed.

The needle valve must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles!
We recommend the installation of strainer type SFD or SFM.
